

# *Mechanical Forests of Future*

In future there will be man-made "supertrees," massive structures towering high over us.

The supertrees themselves will be the culmination of science's most promising sustainable ideas. They will act as vertical gardens, as well as a massive solar power generator.

# Features

- Blending of an urban environment within a natural setting.
- The artificial and the natural environment will not only co-exist, but also thrive.
- The supertrees will be the culmination of science's most promising sustainable ideas.
- The trees will even be used to collect rainwater.
- Within the steel framework of each tree will be a vibrant Eco-system of various plant species, ranging from tropical flowers to ferns.
