## Electricity

- why are so many schools a blaze of lights when the students have gone home in the evening? Give somebody the responsibility to switch off all the lights, except important security lights.
- Use natural light, instead of artificial lights by letting the sunshine in where there are win-Dows.
- Use long-life, low-watt, fluorescent bulbs.
- Turn off appliances that use electricity, such as computers and photocopiers when they are not in use, or have a system of putting them on 'stand-by' mode.
- many classrooms are kept like refrigerators, turn down ACs and certainly turn them off in the winter.
- Ask the principal to investigate installing solar panels and using solar energy to run the electricity of the school
