

Water

- Turn off dripping taps and fix any leaking water system.
- Cover swimming pools to reduce evaporation and recycle pool water to irrigate the school's grounds.
- Plant drought resistant trees and plants in the schools grounds.
- Use drip irrigate on all plants to reduce evaporation.
- Mow grass as infrequently as possible to reduce stress to the grass and so reduce water use.
- Irrigate in the early morning or evenings, not during the heat of the day.
- Install dual-action toilets that reduce unnecessary water going down the drain.
- Put posters up where water is used to remind people to save water.
